Jump Statements

- ▶ Java supports three jump statements: **break**, **continue**, and **return**.
- ▶ These statements transfer control to another part of your program. Each is examined here.

Break Statement

```
System.out.print("Enter a for check break statement : ");  
int a=mScanner.nextInt();
```

```
for(int i=0;;i++){  
    if(a==i){  
        break; /*break from loop*/  
    }  
}
```

Continue Statement

```
for (int i = 0;; i++) {  
    if (a == i) {  
        System.out.print("Enter activated : " + i);  
        break; /* break from loop */  
    }  
    System.out.print("Enter activated : " + i);  
    continue;  
}
```

Return Statement

```
int a = mScanner.nextInt();
```

```
boolean result;
```

```
if(a%2==0){
```

```
    result=true;
```

```
}else{
```

```
    result=false;
```

```
}
```

```
return result;
```
